SUMMARY

AI and robotics engineer running two active ventures (MDK Engineering, Rechnungs-API) following a prior co-founded acquisition (ShareYourSpace, sold to Pixida GmbH in 2026). Affiliated researcher at Devanthro on humanoid manipulation; upcoming visiting researcher at the University of Oxford on soft bioreactor design for tissue engineering. Production ML background at Siemens, where I shipped a recommender system serving 300,000+ users.

INDUSTRY EXPERIENCE

MDK Engineering (marcelkueck.dev), *Munich, Germany* 01.2026 – Present
Founder

- Solo AI and robotics consultancy delivering AI integration and workflow automation to SMB and enterprise clients across multiple sectors.
- Ship retrieval-augmented generation systems, conversational agents, and AI-powered internal tools tailored to client domains.
- Build automation pipelines on n8n and Make integrating LLM and ML capabilities into client business processes.

Rechnungs-API (rechnungs-api.de), *Munich, Germany* 02.2026 – Present
Co-Founder and CEO

- Co-founded a B2B invoicing API, operating with a two-person team.
- Serving active paying customers with approximately 1,000 daily visits.
- Lead product direction, technical architecture, and go-to-market.

ShareYourSpace (shareyourspace.com), *Munich, Germany* 02.2025 – 01.2026
Co-Founder and COO

- Co-founded a marketplace for shared and flexible office space, an Airbnb-style platform for the coworking sector.
- Led day-to-day operational and product activities through the company's final year.
- Negotiated and executed the sale of the company and software platform to Pixida GmbH, a prior client.

Siemens AG, *Munich, Germany* 09.2021 – 12.2023
Software Engineer, Siemens SGI

- Designed and shipped a recommender system serving 50,000+ digital resources to 300,000+ users.
- Built machine-learning and web features across the SGI platform.
- Stack: Python, NumPy, TensorFlow, SQL, TypeScript, JavaScript, Angular.

RESEARCH EXPERIENCE

University of Oxford, Department of Materials, *Oxford, United Kingdom* 06.2026 – 10.2026
Visiting Researcher

- Designing a soft, flexible bioreactor chamber for skeletal muscle tissue engineering with electrospun hollow fibre scaffolds, supporting dual perfusion and mechanical stimulation. Part of a broader DPhil project on a skeletal muscle drug testing platform. Hosted by Prof. Pierre-Alexis Mouthuy.
- Chamber design in Fusion 360, SLA 3D printing, and soft membrane assembly. Targets clean, repeatable manufacture, leak-free operation, and force transmission from external mechanical loading systems.
- Extending the brief with integrated sensing and exploratory ML for enhanced bioreactor functionality.

Devanthro, *Munich, Germany* 03.2026 – Present
Affiliated Researcher

- Working on control and embodied AI for Robody 5.0, the next-generation humanoid platform built on the OpenArm bimanual robotic arm.

- Building an end-to-end pipeline from VR-based teleoperation through LeRobot policy training to on-hardware deployment.
- Investigating data-efficient imitation learning for bimanual manipulation.

Devanthro, Munich, Germany
Research Student and Founder's Associate

10.2022 – 08.2024

- Bachelor's thesis on neural-network-based joint-space trajectory tracking for a compliant tendon-driven humanoid arm (Robody 3.0). Supervised by the Chair of Robotics, AI and Real-Time Systems at TUM (Prof. Alois Knoll).
- Co-developed Robody 4.0 (Viper arm platform): mechanical assembly, Fusion 360 CAD across structural and compliant components, and a Python script for parametric design of the elastic hull fitted over the rigid arm structure.
- Supported the founders across fundraising, strategy, and general operations as Founder's Associate.

TECHNICAL SKILLS

Programming:	Python, Rust, C++, TypeScript, JavaScript
Machine Learning & Robotics:	PyTorch, TensorFlow, LeRobot, ROS 2, MuJoCo
Fabrication & Prototyping:	Fusion 360, parametric CAD, SLA 3D printing, sensor integration, hardware-software integration
Tooling & Systems:	Linux, Git, Docker, NVIDIA Jetson, embedded systems

PERSONAL PROJECTS

- **LeRobot SO-101 Manipulator:** End-to-end vision-language-action policy training and on-hardware deployment on the SO-101 arm using the LeRobot framework.
- **RustyRobots:** Open-source robotics framework for embodied AI in Rust; modular crates for perception, control, and simulation integration.
- **RustML:** Open-source machine-learning framework in Rust; tensor operations, automatic differentiation, and inference.
- **Roasterio:** Smart coffee-bean roaster combining a custom sensor stack with automatic roast-profile optimisation.
- **LaMarcello:** Retrofit controller converting classic espresso machines into smart, app-connected appliances; PID temperature control and flow profiling.
- **Murph:** Online medical consultation platform pairing medical students with elderly users for accessible primary advice.
- **Marie Lou Coffee:** Personal coffee-roasting venture; small-batch artisanal roasting, exploring a commercial launch.

EDUCATION

Technical University of Munich, Munich, Germany 10.2019 – 05.2024
B.Sc. Computer Science. Specialisation in Robotics and Artificial Intelligence. Member of TUM.AI, Software Development department.

University of Oxford, Oxford, United Kingdom 05.2024 – 07.2024
Machine Learning Summer School. Coursework and research seminars on reinforcement learning, generative AI, and machine learning in medicine. Selective admission (7%).

Google Machine Learning Bootcamp Europe 07.2022 – 11.2022
Three-month programme on applied machine learning. Selective admission (10%).
